

Activate the system on your computer:

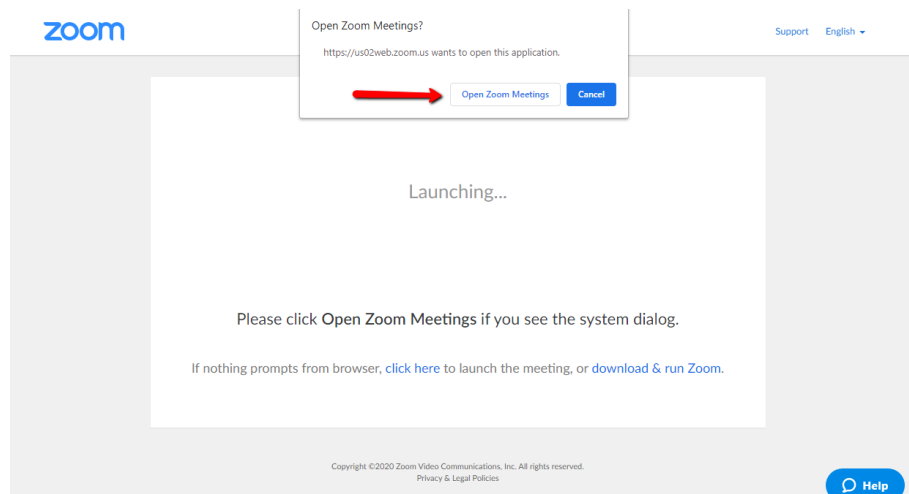

Enter the patient's phone number or email, and click Login. That's it, you're in. The system will run the zoom software on your phone or computer and initiate a zoom call with the patient. Of course, it is better to notify the patient in advance that he or she is about to receive an email or SMS inviting them to the call at the scheduled time.

Anyone who knows the zoom can stop here. Don't know the system yet? Don't worry, in a few minutes you'll be experts!

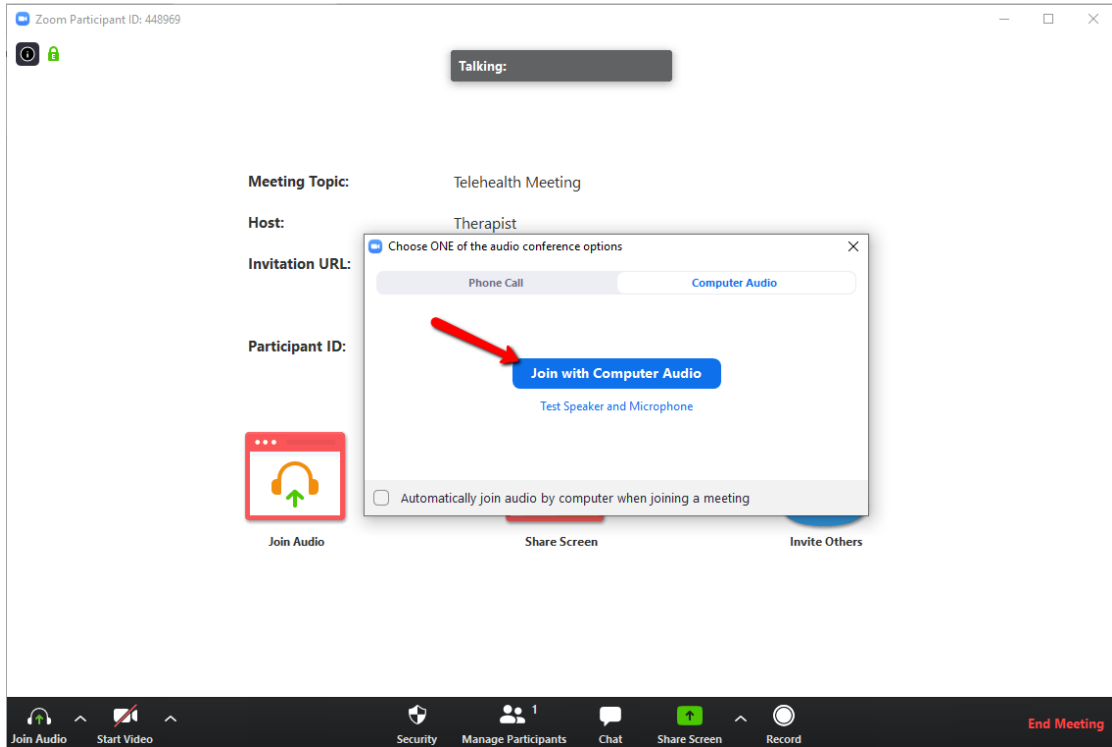

On the computer:

After clicking "enter live video", the zoom software opens (it will be automatically installed if you haven't already installed it). Afterwards, you must click on the red arrow marked "open zoom meeting"

Congratulations, you're in:

Confirm using your computer's audio:

Great, a little more and you can get started.

Get to know the bar at the bottom of the screen:

The buttons on the left can activate or stop the microphone and camera activation (make sure you have a microphone and camera connected to your computer)

Wait for the patient to connect to the call. When connected, you will see an invitation at the bottom of the screen to confirm the conversation with the patient. Click the blue "admit" button and that's it.
